Key operational responsibilities

As a key member of our cross-functional and agile software engineering teams you will engage to create fantastic services for our top brand clients. We believe in team ownership of services and features all the way from idea to production. Engaging with others to solve complex problems is natural for you and you really want to make a difference.

In the role as a senior Software Engineer you will facilitate across teams and help foster collaboration and knowledge sharing. You know how to resolve complex issues and have a holistic outlook on services and systems. For the role of Senior Software Engineer you will also have the opportunity to lead teams while working hands-on as a software engineer.

Key skills required

We believe you have:

- Bachelor's degree in computer science or equivalent
- 5+ years working as a Java Developer in a backend environment
- Experience of writing robust, maintainable code, and an understanding of how to test, architect and work with distributed, high frequency services.
- Have a good understanding of best practice software engineering principles with experience in SCRUM or other agile development methods
- Experience of MicroServices (SOA), JavaScript and AngularJS
- Experience of Unix/Linux environments
- Experience in NoSQL or other relations databases
- Excellent written and verbal language skills in English is required, including the ability to communicate clearly and efficiently with others.

Personal Skills

As a person you are dedicated, enterprising and come with a positive outlook, energy and attitude that everything is possible. (the impossible just takes a little more time)

We insist that you have a passion for what you do and that you have constant drive and curiosity for learning new things and we expect you to, just as important, help others improve as well.

You will work from our truly global office in Stockholm. We are proud to foster a workplace free from discrimination.
